

Careers Week Summer 2024

We held an incredible Careers Week with parents, grandparents, STEM Ambassadors and other adults from the community, coming in to talk about their careers. We heard from a Statistician who uses data to analyse air pollution; a female Astronomer; a STEM ambassador talking about women in technology; the department heads of HR, Food & Beverages and Housekeeping and a graduate Emerging Leader from the DeVere Waterpark Hotel; a Computer Programmer; an IT Consultant; an RAF Engineer; a Speech and Language Support Practitioner; a Pharmacist; a Baker; A Travel Consultant; a Surgeon; an Army Sergeant; an IT Security expert talking about AI and ChatGPT and a STEM female Robotics Engineer. The children have been so excited and inspired to hear about the jobs that they might go into in their futures.

I learnt that Pharmacists make sure that the right people have certain medicines.

I was inspired by Mo because he brought in Lego and made it into robots that could walk, and he worked with Google.

I was interested in Amy because she taught us surgery.

I found Wendy interesting because she helped people talk and improve their stuttering.

I liked that they talked about their jobs, and I found it interesting.

I didn't know that the army uses robots to search buildings.
